

Eurofins services – Food contact materials

Always up to date with legislation changes and new customer specifications with Eurofins analyses for packaging

An increasing amount of food is sold in packaging material. The packaging has to fulfil more and more requirements. Firstly, packaging shall sell, and carry all necessary information about the product, the ingredients and guidance on storage and preparation of food. Packaging has to be stable and fit for its purpose. It shall protect against microbial deterioration, and it shall be safe.

Materials and articles that come into contact with food are object of serious public concern.

They must fulfil severe requirements on physical and chemical safety.
