

MET Mark

NRTL to MET NRTL Conversions

MET Laboratories can offer clients with current NRTL Certifications a “Listing Transfer” in which MET will take over the Certification of another NRTL so long as it is a standard in which both NRTLs are OSHA accredited. This can result in a decrease in the number of factory inspections a client needs along with decreased annual costs. For successful transfer, it is necessary that the client provides MET with 1) all of the original Certification Documentation/Records and 2) A copy of a current factory inspection report or other evidence of certification in good standing. Upon successful completion, MET will issue Authorization to use the MET Mark, along with a MET Report and Certificate.

NOTES: NRTL Listing Transfers require that MET have the latest copy of the Listing Report/Certificate of all products to be transferred. Success assumes 1) Certifications are current/valid and 2) Factory Inspection results in Compliance. If any amendments/modifications have been made, they will need to be reviewed and possibly tested.
