

One-stop service - world-class, worldwide

Global Service Portfolio

A Unique Service Offering - the first agrochemical CRO to offer a truly global service

Part of the Eurofins Scientific Group of companies, Eurofins Agrosience Services aim is to be the number one contract research organisation for the Agrosience sector. Formed in 2006, Eurofins Agrosience Services has succeeded in acquiring some of the agrochemical industries most highly regarded CRO's and laboratories. In addition, the company has succeeded in attracting numerous experts, specialists and individuals that are well known and respected in the Agrosience field.

This is part of an ongoing process to strengthen the Agrosience portfolio in terms of expertise, services and geographical reach. All constituent companies have a proven track record, some of them stretching back over more than 50 years, for providing their customers with high quality services in those areas in which they specialise.

Eurofins Agrosience Services now leverages the expertise and strengths of each to create a full service proposition for the agrochemical manufacturer:

Biological Assessment

Biological evaluation is a crucial process in the discovery, development and registration of all crop protection and specialty products.

Efficacy studies for registration (GEP) and demonstration are conducted globally by dedicated staff that can provide data on representative climates in various regions and in a range of cropping systems.

We provide a full range of growth chamber, glasshouse and field studies for biological evaluation as well as ongoing support for trial programs, evaluating data and producing the dossiers required for registration.

Consumer & Human Safety

Establishing that a plant protection product poses a low risk to human health and safety is of paramount importance in order to successfully register and market the product on a global basis.

From operator exposure assessments to determining residues in pollen and bee products; from metabolism studies all the way through to GLP field residue studies – Eurofins Agrosience Services are able to support in all aspects of human exposure including food safety, dietary risk assessment and consumer safety, and are able to direct, conduct and evaluate the complex scenarios required for your product registration.

Environmental Safety

An international team of ecotoxicology and environmental chemistry experts provide a complete Environmental Safety solution.

We focus on the fate and behaviour of substances and formulations in environmental systems, on their bioavailability, assimilation in organisms, as well as biological responses of these organisms, and on their subsequent fate in the environment. Our scientists work together to respond effectively and quickly, using the most current approach to complex, in-depth environmental studies.

Product Chemistry

Our experts are experienced in working with most types of formulations and AI's and can offer these both to GLP and non-GLP.

We evaluate the intrinsic properties and behaviour of chemical active substances and formulations, and to confirm identity of active substances in plant protection products, providing analytical services to conduct impurity profiling and 5-batch analysis in the technical materials needed for technical equivalence checks. To support the registration of active substances and plant protection products, EAS offers a complete range of product chemistry testing.

Regulatory Consultancy

Eurofins Agrosience Regulatory provides a bespoke registration service to meet all your regulatory challenges.

EAR is supported by a global network of field stations, laboratories and carefully selected partners. We are committed to advising on the best registration strategies and to compile registration documentation in line with current and upcoming regulatory guidelines.

Seed Services

Providing a broad range of services to the seed industry, EAS operates across a global network of field stations and laboratories.

Our services include observation and demo variety trials, multipurpose trials, seed treatment services, seed treatment analysis, inoculum production and biotic stress trials, abiotic stress trials in severe conditions, line purification and maintenance, early stage hybrid production and grow out control.

Global Coverage

EAS Group can offer a truly global service with coverage of Asia, Australasia, Europe, North America, and South America. This geographical diversity means that we are able to conduct studies all year round and also offer a huge range of services to support your programs and goals.

Eurofins Scientific Group

Eurofins Scientific is a life sciences company that serves a wide range of industries including the pharmaceutical, agricultural, food and environmental sectors.

Today the Eurofins Scientific Group is a leading provider of analytical services with:

- An international network of more than 900 laboratories across 61 countries in Europe, the USA, Asia-Pacific and South America
- Around 61,000 staff
- A portfolio of over 200,000 reliable and validated analytical methods
