Re: Laboratory Certification Request
Certification for EPA Method 100.2, Asbestos, New York Lab ID No. 12048

Dear Dr. Bai:

This will acknowledge receipt of the information submitted concerning your laboratory - New York's NELAP certification for testing drinking water from the State of New York. The New York NELAP certification expires on 4/1/2026. The information verifying your laboratory certification has been reviewed and found satisfactory. Consequently, analytical results on drinking water conducted by Eurofins CEI, Inc. under the terms of the New York laboratory program are acceptable.

The Arkansas Department of Health has no formal program for certifying private laboratories for analyses of drinking water. We do, however, have an informal process to review a laboratory's certification status with other states and accept analytical information following a satisfactory review.

When submitting the results of any analysis performed for public water systems in Arkansas, please provide a copy of the most current information on your certification status. Also, any laboratory or personnel changes that might adversely affect the quality of analyses or the certification status must be reported.

Your continued cooperation is appreciated.

Sincerely,

A handwritten signature in blue ink that reads "Teresa Lee".

Teresa Lee, P.E.
