

Service Specification Organic Contaminants

The Eurofins experts from the Competence Centre for Organic Contaminants have long-term experience in trace analysis and offer besides the current analysis also a competent consulting service.

Through research and development as well as active memberships in standardization committees for process contaminants, the Eurofins experts are in constant exchange with the scientific specialists, are always informed about current developments and can give informed recommendations for individual test plans.

The most important parameter at a glance:

- Acrylamide
- Bisphenols (bisphenol A, bisphenol F, BADGE, NODGE)
- Polycyclic aromatic hydrocarbons (PAHs)
- 3-Monochloropropane-1,2-diol (3-MCPD), Dichloropropanols (DCP)
- 3-Monochloropropane-1,2-diol ester (3-MCPD ester)
- Glycidyl ester
- Sudan dyes and other illegal dyes
- Solvent residues
 - BTEX (benzene, toluene, xylenes, ethylbenzene)
 - Light volatile chlorinated hydrocarbons (LCC)
 - Extraction solvent
- Ethyl carbamate
- Furan, 2- and 3-methylfuran
- Melamine
- Mineral oil hydrocarbons (MOSH/POSH and MOAH)
- Nicotine
- Pentachlorophenol (PCP)
- Packing residues
 - Semicarbazide (SEM)
 - Photoinitiators (isopropylthioxanthone: ITX; 2-ethylhexyl-4-dimethylaminobenzoate: EHDAB)
- Plasticizer
 - Phthalates / adipates / other
