Who We Are

Fapas® is the leading global provider of proficiency testing schemes, quality control samples and reference materials in the food sector, offering products throughout the year.

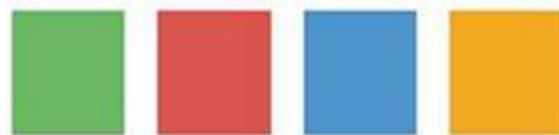

Proficiency testing is an independent check of your laboratory procedures providing you with a completely confidential assessment of your capability. Not only does participation in the relevant testing schemes allow you to demonstrate your systems and the technical ability of your staff, it will also help you gain and maintain ISO/17025 accreditation.

Established in 1990, we are an experienced, accredited provider of proficiency tests for the food and water, environmental chemistry and microbiology sectors. Taking part in our proficiency tests provides you with the confidence in your laboratory equipment, methods and staff, and assurance that you are delivering the quality results required by your customers.

We provide our participants with a confidential service that allows you to participate at a level that suits you; there is no minimum number of proficiency tests that you must take part in each year. Our system provides an easy reporting facility via our website and our comprehensive reports, which receive rigorous statistical analysis and contain method comparisons.

We also offer quality control samples and reference materials from selected food chemistry proficiency tests which can be purchased easily through our website throughout the year.

Our four Fapas® proficiency testing schemes cover food chemistry, food microbiology, GM and water and environmental analysis.

Fapas® Proficiency Tests

Proficiency Testing in Food Chemistry

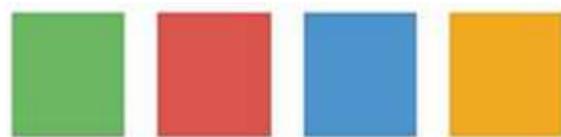

Proficiency testing is an essential part of laboratory quality procedures. Taking part gives you confidence in your laboratory equipment, methods and staff, and assurance that you are delivering the quality results demanded by your customers.

Fapas® – Food Chemistry covers chemical analysis of real food samples for a wide range of target

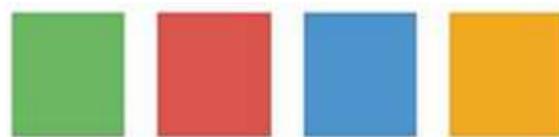

analytes including: nutritional components, additives, natural contaminants, pesticide and veterinary medicine residues, and packaging chemical migrants.

Participation can be at a level that suits your business – from taking part in one of our scheduled tests through to company-specific closed tests. Quality control materials are available for your own quality checks or for training purposes.

Results from each proficiency test receive rigorous statistical analysis, ensuring you have clear feedback on your performance. Comprehensive reports provide information on analytical methods used by other participants. We can provide problem-solving consultancy on your laboratory procedures if required.

Participation in Fapas® – Food Chemistry is easy. Arrangements can be made through our network of agents, or via our website, fapas.com. Fapas® – Food Chemistry follows international guidelines for proficiency testing and is accredited by UKAS to ISO/IEC 17043.

Halal Compliance

Our halal compliance proficiency tests focus on pork and alcohol contamination in a range of food products. With pork we inspect the DNA sequence order structure of specific meats as they are different, and with alcohol we can test at very low levels, due to the nature of alcohol molecules being very volatile.

Nutritional Analysis

As nutritional legislation increases, the proficiency of laboratories to provide accurate results to food manufacturers for labelling is critical, to help consumers make informed choices about the food they eat. Fapas® offers the widest range of analyte/matrix PT combinations for the food sector.

Oils & Fats

The rancidity of fats and oils is determined by the level of oxidation in a sample. There are various forms of rancidity testing which are tested through the Fapas® range of proficiency tests. Testing is important to demonstrate the quality and shelf life of a product.

Authenticity

With food authenticity under the spotlight, consumers are demanding assurance that their food is what it says it is. Is that burger really beef? The ability to determine the authenticity of foods can prevent mislabelling, substitution of cheaper ingredients, and adulteration. All of which are risks in the supply chain.

All of the meat based authenticity tests are qualitative tests (presence/absence) to determine whether adulteration/contamination of any other species has occurred.

Allergens

As the number of people with life-threatening allergies increases and international legislation on allergen management increases, the requirement to demonstrate your allergen testing capabilities increases. Testing for food allergens is essential for protecting consumers and verifying the allergen status of food ingredients and products.

Migration – Overall & Specific

Foods are packaged in materials intended to protect the product, increase its shelf life and make it more attractive to the consumer. Those same packaging materials, however, could actually leach undesirable chemicals into the food. Bisphenol A has received a lot of media attention due to its presence in products intended for use by infants.

Environmental Contaminants

The occurrence of Polycyclic Aromatic Hydrocarbons (PAHs) in foodstuffs is a major source of exposure to these carcinogenic compounds for humans. Given the risk to human health from PAHs in food, the European Commission established maximum levels for PAHs and identified a group of 4 PAHs as indicators based on occurrence and toxicity in EC 1881/2006. These include benzo[a]pyrene (BaP), benz[a]anthracene (BaA), benzo[b]fluoranthene (BbF) and chrysene (CHR).

Acrylamide, Furan, 3-MCPD, Melamine

Industrial chemicals such as acrylamide and melamine are known to be harmful to human health if consumed and are strictly regulated. There have been cases of adulteration where melamine has been added to food to artificially increase its apparent protein content. Therefore, the ability to accurately measure its presence is important to retailers and consumers.

Nitrate & Nitrite

These are chemicals used in fertilisers and as food preservatives and are often detected in contaminated drinking water, cured meat products as well as in fruit and vegetables. Exposure at high levels can result in severe health issues particularly with infants, where they can be exposed through drinking water in infant formula.

Veterinary Drug Residues

Veterinary drugs are frequently used to treat disease and promote healthy livestock to improve the quality or yield of meat and animal products. This introduces the risk of veterinary drug residues and their metabolites entering the food chain if they persist in the animal products and their presence is tightly regulated.

We intend to use material containing **incurred residues** wherever possible. Refer to the list on page 30 for details of potential residues in tests where only general categories are stated.

Mycotoxins – Aflatoxins & Multi-Mycotoxins

Mycotoxins are toxic secondary metabolites produced by fungi on agricultural commodities in the field or during storage. It is estimated that 25% of the world's food crops are affected, resulting in large commercial losses. Fapas® has introduced multi-mycotoxin proficiency tests as well as those for emerging mycotoxins.

Metallic Contaminants

The presence of metals such as arsenic, cadmium, lead and mercury in food is of particular concern due to their toxicity. These naturally occurring chemicals can occur as residues in food by a range of mechanisms such as their natural presence in the environment or contamination during food processing and storage. Their accumulation in the body can lead to harmful effects over time and their presence in foodstuffs is strictly regulated.

Pesticide Residues – Animal Products / Fats and Oils

In order to ensure good agricultural practice, pesticide residues are under strict legislation worldwide. Some pesticide residues exhibit bioaccumulation and build up to harmful levels in the body and environment. Fapas® offers pesticide residues PTs for a range of matrices.

Each test material will contain any number of the pesticides given in **List 1**, except tests: **05125 & 05132** (infant formula) which will contain any number of the pesticides given in **List 1 & List 2**, **05130** (virgin olive oil) which will contain any number of the pesticides given in **List 4** and test **05131** (prawn) which will contain any number of quaternary ammonium compounds in (**List 3**).

Potential Pesticide Residues – List 5

BAC 10 (Benzyldimethyldecylammonium Chloride)	BAC 12 (Benzyldimethyldodecylammonium Chloride)
BAC 14 (Benzyldimethyltetradecylammonium Chloride)	BAC 16 (Benzyldimethylhexadecylammonium Chloride)
Chlorate	DDAC (Didecyldimethylammonium Chloride)
Perchlorate	

Potential Pesticide Residues – List 6

Parent compound only unless otherwise stated

2-phenylphenol (ortho-phenylphenol)	abamectin (sum of avermectin B1a and B1b only)	acetamiprid	anthraquinone	bifenthrin
buprofezin	carbaryl	carbendazim	chlorfenapyr	chlorfenvinphos (sum of E and Z isomers)
chlorothalonil	chlorpyrifos (ethyl)	cyhalothrin-lambda	cypermethrin (sum of constituent isomers)	DDD-pp (TDE)
DDE-pp	DDT-op	DDT-pp	deltamethrin	diazinon
dicofol (sum of p,p' and o,p' isomers)	dimethoate	dinotefuran	endosulfan I (alpha)	endosulfan II (beta)
endosulfan-sulfate	ethion	fenazaquin	fenitrothion	fenpropathrin
fenpropimorph	fenvalerate (sum of constituent isomers in any ratio including esfenvalerate)	fipronil-sulfone	HCB (hexachlorobenzene)	HCH-A (alpha hexachlorocyclohexane)
HCH-B (beta hexachlorocyclohexane)	HCH-G (gamma hexachlorocyclohexane / lindane)	imidacloprid	linuron	malathion
methomyl	monocrotophos	oxadixyl	phenthoate	phosalone
pirimiphos-methyl	procymidone	propargite	pyridaben	pyrimethanil
quinalphos	terbutylazine	tolfenpyrad	triazophos	trifloxystrobin

Potential Pesticide Residues – List 7

Parent compound only unless otherwise stated

acetamiprid	amitraz
clothianidin	coumaphos
dinotefuran	fluvalinate (tau)
imidacloprid	nitenpyram
thiacloprid	thiamethoxam

Actual Pesticide Residues – List 8

Matrix *will* contain **ALL** of the pesticides listed in this table

Parent compound only unless otherwise stated

acetamiprid	aldrin	azoxystrobin	bifenthrin	chlorpyrifos (ethyl)
chlorpyrifos-methyl	cypermethrin (sum of constituent isomers)	DDE-pp	deltamethrin	dichlorvos
dieldrin	dimethoate	endosulfan I (alpha)	endosulfan II (beta)	endosulfan-sulfate
endrin	ethion	fenpropathrin	fenthion-sulfoxide	HCH-A (alpha hexachlorocyclohexane)
HCH-B (beta hexachlorocyclohexane)	HCH-G (gamma hexachlorocyclohexane / lindane)	malathion	parathion-methyl	permethrin (sum of isomers)
triazophos

ISO Accreditation

The Fapas® proficiency testing schemes are accredited by UKAS, Proficiency Testing Provider No. 0009.

0009

- [UKAS Accreditation Certificate](#)
- [UKAS Schedule of Accreditation](#)

This accreditation confirms that we comply with the requirements of International Standard ISO/IEC 17043:2010.

In addition, Fera is accredited by other external bodies to other internationally recognised certification including ISO 9001:2008.

- [Fera's Quality Documentation](#)

Fapas® (and other proficiency testing schemes) does not award accreditation. That is the responsibility of national accreditation bodies. A list of national and international accreditation bodies can be found at www.fasor.com/iso25. Results of proficiency testing are used by laboratory accreditation bodies as part of the process to assess the ability of laboratories to perform analytical tests for which accreditation is required.
