Human Safety Testing

Human Safety Testing

Get your products to market faster than ever. A rapid turnaround in testing your products saves you money, time and resources. Stay focused on growing the value of your brands outsourcing the testing to the leading contract laboratory. Release valuable resources, improve buyers, market and customer perception, meet the stringent regulatory requirements by working with our world class scientists.

Testing Services for Cosmetics

As a manufacturer of personal care and cosmetic products you are responsible to identify any potentially hazardous ingredient to ensure consumer protection. Toxicological testing is used to determine, whether cosmetic products would pose any kind of risk to the health of consumers. Within Europe a ban on the performance of animal testing for cosmetic products came into force on 11 September 2004 (animal testing ban). Furthermore the Cosmetics Regulation prohibits the placing on the market of cosmetic products, or products containing ingredients, which have been tested on animals. Eurofins BioPharma Product Testing is a leader in safety testing without the use of animals and is deeply committed to the principles of the 3 R's of Replacement, Reduction and Refinement. With a set of alternative *in vitro* test methods we are able to provide the full service to assess necessary toxicological data under GLP-compliance. Eurofins also develops new assays and participate in their validation working together with the relevant authorities.
