Human Safety Testing

Human Safety Testing

REACH and similar regulations place the responsibility on industry to manage the risk connected to public health. Don't let the complexity of the regulatory framework taking your focus away from your core business. Ensure your product gets to market smoothly and fully meeting all relevant regulations' requirements as well as protecting customers and the public at large from potential harm.

Testing Services for Industrial Chemicals

Your success depends on your capacity of understanding the ever-changing regulatory framework governing the Chemical sector. The REACH Regulation (EC) No 1907/2006 became effective June 1, 2007 creating a single registration system for both new and existing chemicals in Europe and, since then, has inspired the introduction of several regulatory systems across the world. The main objective of REACH is to improve the protection of human health and the environment from the risks that can be posed by chemicals, while enhancing the competitiveness of the EU chemicals industry. REACH set a new standard making industry responsible for demonstrating the safety of its products for the first time. Full compliance may be difficult to achieve and demands, in all cases, a talented and multidisciplinary team of experts. Eurofins has been actively involved with REACH since before the Regulation came into force and, as a consequence, has accumulated a great deal of experience. Eurofins is ideally equipped to assist customers in a timely and cost effective manner with all their testing and analytical needs.
