

ENEC Certification Scheme

ENEC for safe products in Europe

ENEC is the high quality European mark for electrical products that demonstrates compliance with European safety standards.

ENEC procedure

Quality conscious manufacturers and distributors show with the ENEC mark that they are offering tested and monitored products. The application of the ENEC mark to an electrical product ensures that it complies with the relevant European safety standards and has to be accepted by all member states. Surveillance of product and production provides safety assurance for the lifetime of the ENEC certification. It offers the certificate holder various benefits:

- Suitable for household appliances, electronic equipment, lighting and so on
- Compliance with the EU low-voltage-directive
- Reduced licence costs
- Evidence in case of product liability claims

Obtaining the ENEC certificate

Testing and certification according to European standards. Product manufacturing monitored by our accredited inspection division or an equivalent partner organisation for foreign production facilities to ensure ongoing product compliance.
